Codebase 1
Codebase N
From the CVEs, identify which are medical related. For each medical related CVE, determine if the affected software is open source and find the repository. Give me those codebases along with their GitHub link.

result
constant arg?
No
in test code?
No
Decision
✓ Kept
Sink stays in the candidate set for path search
Data-Flow Path
n = recv(…)
parse_header(buf)
copy_field(dst, src)
memcpy(dst, src, strlen(src))
Argument Trace
argument
src (arg 2)
traced back through
copy_field param #2
parse_header buf
recv() buffer
entry_point
"recv"
Verdict
✓ Is Vulnerable:
recv() input reaches memcpy() via parse_header() and copy_field(). No bounds check limits the copy length, so input longer than dst overflows it (CWE-787).
Confidence: High
